

Muhammad Raafey Tariq

Full-Stack AI Software Engineer

Email: raafeytariq@gmail.com | Phone: +49 1525 8752994 | Location: Cologne, Germany
LinkedIn: linkedin.com/in/raafey | GitHub: github.com/raafey | Portfolio: raafey.github.io
EU Blue Card holder — Eligible to work in Germany

SKILLS

Programming: Python, TypeScript, JavaScript (Node.js), C#, R

Frameworks and Libraries: FastAPI, LangChain, PyTorch, Scikit-learn, Hugging Face, spaCy

AI and LLM: Agentic Architectures, Tool Use, Function Calling, Retrieval-Augmented Generation (RAG), OpenAI API, Anthropic API, Google Gemini

Orchestration: Multi-step Inference Pipelines, Camunda Workflow Engines, RabbitMQ, Knowledge Graphs (Wikidata, SKOS), Vector Search

Observability: Application Insights (Azure), CloudWatch (AWS), Structured Logging, Distributed Tracing, Agent Evaluation Frameworks

Databases: Cosmos DB (vector search), MongoDB, PostgreSQL, MySQL

Cloud and DevOps: Microsoft Azure, Amazon Web Services (AWS), Docker, Terraform (Infrastructure as Code), GCP

CI/CD: Continuous Integration and Continuous Deployment (CI/CD), GitHub Actions, Azure DevOps, Automated Testing, Code Reviews

Frontend: React, Node.js, HTML, CSS

Languages: English (C1), German (A1), Urdu (Native)

PROFESSIONAL EXPERIENCE

Advanced Full-Stack Developer, AI Systems

10.2024 – Present

Vidispine GmbH (Lumine Group), formerly Arvato Systems | Cologne, Germany

- Designed and shipped Vidinet Cognitive Services (VCS), a production AI backend in FastAPI and C# powering the MediaPortal product for 5 enterprise customers, consolidating 7 LLM and vision providers (OpenAI, Anthropic, Gemini, Twelve Labs, Amazon Rekognition, Amazon Transcribe) behind one unified REST contract.
- Built AutoNewsGPT for Al-Jazeera end-to-end: an agentic pipeline combining GPT tool use and function calling, a TTS voice analyzer, and the Twelve Labs Pegasus video-understanding model to auto-generate broadcast-ready news highlights, cutting an hour-plus editorial process to ~30 seconds.
- Integrated non-deterministic AI inference into the Vidiflow BPMN workflow engine via AWS Lambda and RabbitMQ, orchestrating 1,000+ LLM and multimodal inference tasks per month inside enterprise media workflows without breaking throughput SLAs.
- Led the MediaPortal production revamp in TypeScript, React, and Node.js, shipping multilingual metadata management across 24 languages to the European Parliament, including a SKOS-based semantic API powering knowledge-graph-style document filtering.
- Implemented observability for production AI workflows — structured logging, request tracing, latency and cost monitoring via Application Insights and CloudWatch across 6 FastAPI and Node.js services — cutting mean time to debug multi-step LLM failures from hours to minutes.

AI Software Engineer (Working Student)

10.2021 – 10.2024

Arvato Systems, Bertelsmann SE & Co. KGaA | Cologne, Germany

- Built AutoCut GPT (Master's thesis) end-to-end: an agentic system where an LLM plans tasks, selects deep-learning models from a registry via function calling, and orchestrates multi-step inference to produce annotated video highlights from natural-language prompts, exposed as a FastAPI service (F1 = 0.96 on task-plan structure).
- Built a production LangChain service in C# using MapReduce and MapRefine to enable RAG-style processing of documents exceeding 128,000 tokens, unblocking use cases infeasible under standard LLM context limits.
- Replaced a dedicated Azure vector search SKU with a Cosmos DB and Azure Functions service, cutting infrastructure cost from ~\$80/month to ~\$5/month while preserving semantic recall.
- Built a GPT-powered knowledge-graph enrichment proof of concept extracting and classifying clinical insights from 5,000+ unstructured health records for graph-database ingestion.
- Developed Mediagraph, combining BERT-based Named Entity Recognition with Wikidata entity linking to automate structured metadata enrichment of 1,000+ video assets, removing the bulk of manual tagging.

EDUCATION

Master of Science in Data Science

04.2021 – 07.2024

Technische Universität Dortmund, Germany | Final grade: 1.9 (German scale)

Bachelor of Science in Computer Science

08.2016 – 07.2020

FAST National University of Computer and Emerging Sciences, Pakistan | CGPA: 3.5 / 4.0
